Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- In the question marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Show all your working in calculations and include units where appropriate.
- Check your answers if you have time at the end.

Turn over ▶

SECTION A

Answer ALL the questions in this section.

You should aim to spend no more than 20 minutes on this section.

For each question, select one answer from A to D and put a cross in the box \boxtimes . If you change your mind, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

1	Calcium	carbonate	reacts	with	hydr	ochl	oric	acid

$$CaCO_3(s) + 2HCl(aq) \rightarrow CaCl_2(aq) + H_2O(l) + CO_2(g)$$

Which factor does **not** affect the rate of this reaction?

- A concentration
- **B** pressure
- C surface area
- **D** temperature

(Total for Question 1 = 1 mark)

- 2 The rate of a reaction doubles for each 10 K increase in temperature. If the temperature of this reaction is increased from 298 K to 358 K the rate of the reaction increases by a factor of
 - A 6
 - ☑ B 12
 - **C** 36

(Total for Question 2 = 1 mark)

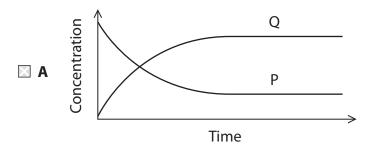

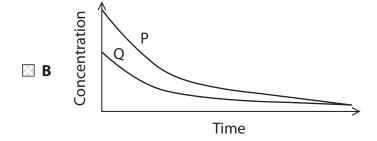

A large amount of P is added to a small amount of Q. A reversible reaction occurs in which P reacts to form Q.

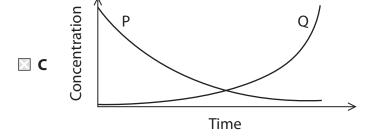

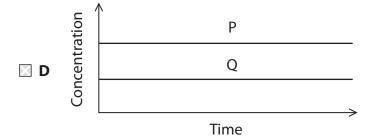

$$P \rightleftharpoons Q$$

Which graph shows how the concentrations of P and Q change as the reaction reaches equilibrium?

(Total for Question 3 = 1 mark)

4 Which equilibrium shifts to the right-hand side when the pressure in the system **decreases** at constant temperature?

- \square **A** $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$
- \blacksquare **B** $F_2(g) + H_2(g) \rightleftharpoons 2HF(g)$
- \square **C** $C_6H_6(g) + 3H_2(g) \rightleftharpoons C_6H_{12}(g)$
- \square **D** 2NOCl(g) \rightleftharpoons 2NO(g) + Cl₂(g)

(Total for Question 4 = 1 mark)

- **5** Potassium chloride reacts with concentrated sulfuric acid, producing misty fumes. It can be deduced that
 - A sulfuric acid is acting as an oxidising agent
 - **B** chloride ions are acting as an oxidising agent
 - □ C hydrogen chloride is formed in the reaction
 - **D** chlorine is formed in the reaction

(Total for Question 5 = 1 mark)

- **6** The oxidation number of sulfur in the sulfate ion, SO₄²⁻, is

 - **■ B** +4

 - □ +8

(Total for Question 6 = 1 mark)

7 Which of these is a disproportionation reaction?

- \blacksquare 6NaOH + 3Br₂ \rightarrow 5NaBr + NaBrO₃ + 3H₂O
- \square C 2NaOH + 2Al + 2H₂O \rightarrow 2NaAlO₂ + 3H₂
- \square **D** NaOH + CO₂ \rightarrow NaHCO₃

(Total for Question 7 = 1 mark)

Which of these sulfates is the **least** soluble in water?

☑ B BaSO₄

 \boxtimes **C** K₂SO₄

 \square **D** Rb₂SO₄

(Total for Question 8 = 1 mark)

Use the data shown.

$$CH_4(g) + 2F_2(g) \rightarrow CF_4(g) + 2H_2(g)$$
 $\Delta H^{\oplus} = -858 \text{ kJ mol}^{-1}$

$$\Delta H^{\Theta} = -858 \,\mathrm{kJ} \,\mathrm{mol}^{-1}$$

$$C(s) + 2F_2(g) \rightarrow CF_4(g)$$

$$\Delta H^{\Theta} = -933 \text{ kJ mol}^{-1}$$

What is the standard enthalpy change of formation of methane (CH₄) in kJ mol⁻¹?

■ A −1791

■ B -75

■ C +75

■ D +1791

(Total for Question 9 = 1 mark)

10 Chlorine reacts with ethane to form chloroethane and hydrogen chloride.

$$Cl_2 + C_2H_6 \rightarrow C_2H_5Cl + HCl$$

Bond	Bond enthalpy / kJ mol ⁻¹
C—Cl	346
С—Н	413
Cl—Cl	243
H—Cl	432
C—C	347

What is the enthalpy change for the reaction, in kJ mol⁻¹?

- B -122
- **◯ C** +122
- **■ D** +1434

(Total for Question 10 = 1 mark)

- 11 Which equation represents the standard enthalpy change of atomisation of bromine?
 - \boxtimes **A** $Br_2(g) \rightarrow 2Br(g)$
 - \square **B** Br₂(l) \rightarrow 2Br(g)
 - \square **C** $\frac{1}{2}Br_2(l) \rightarrow Br(g)$
 - \square **D** $\frac{1}{2}Br_2(g) \rightarrow Br(g)$

(Total for Question 11 = 1 mark)

12 In an experiment, 50.0 cm³ of 1.0 mol dm⁻³ HCl(aq) reacts with 50.0 cm³ of 1.0 mol dm⁻³ NaOH(aq).

The energy released $= 2500 \, J.$

The specific heat capacity of the mixture is $4.18\,\mathrm{J\,g^{-1}~^\circ C^{-1}}$

What temperature change occurs in the reaction?

- A an increase of 6.0°C
- **■ B** a decrease of 6.0°C
- ☑ C an increase of 12.0°C
- ☑ D a decrease of 12.0°C

(Total for Question 12 = 1 mark)

- **13** Which of these species is **not** a nucleophile?
 - \square A NH_4^+
 - B CN⁻
 - \square **C** H₂O
 - ☑ D CH₃NH₂

(Total for Question 13 = 1 mark)

(Total for Question 14 = 1 mark)

(a) What is the white solid, X?

(1)

- A lithium chloride
- **B** calcium chloride
- **C** strontium bromide
- **D** barium bromide
- (b) What causes the flame colour to be red?

(1)

- ☑ A electrons absorb blue and green light as they are promoted
- B electrons emit red light as they are promoted
- ☑ C blue and green light is absorbed as electrons return to lower energy levels
- **D** red light is emitted as electrons return to lower energy levels

(Total for Question 15 = 2 marks)

16 This question is about hydrogen bonding.

(a) Which property is **not** due to hydrogen bonding?

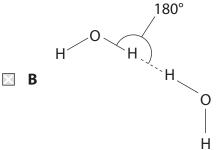

(1)

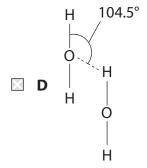

- A ice has a lower density than water at 0°C
- **B** hydrogen fluoride has a higher boiling temperature than hydrogen chloride
- ☑ C H—H bond enthalpy is greater than Si—H bond enthalpy
- ☐ D alcohols are less volatile than alkanes with a similar molar mass
- (b) Which diagram best represents a hydrogen bond between two water molecules?

(1)

180°

A H O H O H

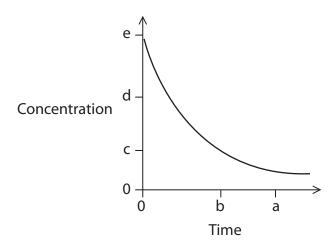

(Total for Question 16 = 2 marks)

17 The graph shows how the concentration of a reactant changes with time.

Which expression gives the best estimate for the value of the rate of this reaction at time b?

- \boxtimes **A** b ÷ c
- \boxtimes **B** d ÷ a
- **C** e ÷ a

(Total for Question 17 = 1 mark)

- **18** Which of these carboxylic acids would be expected to have a major peak at m/z = 57 in its mass spectrum?
 - A CH₃CH₂CH₂COOH
 - B CH₃COOH

 - ☑ D CH₃CH₂COOH

(Total for Question 18 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

Answer ALL the questions.

Write your answers in the spaces provided.

- **19** Iodine can be extracted from seaweed. The seaweed is heated strongly to burn off the organic matter. The resultant ash is boiled in water to dissolve the iodide ions, and the mixture is filtered.
 - (a) Acidified hydrogen peroxide (H_2O_2) is added to the filtrate. A redox reaction takes place with iodine and water as the only products.
 - (i) Write half-equations for the oxidation and reduction reactions that take place. State symbols are not required.

(2)

(ii) Use your answers to (a)(i) to write the overall equation for this redox reaction. State symbols are not required.

(1)

Dn.

(b) The iodine is separated from the aqueous solution using solvent extraction. The aqueous solution is mixed with cyclohexane in a separating funnel, forming two layers.

The mixture is then shaken gently and left until the layers separate.

Most of the iodine dissolves in the cyclohexane layer.

(i) Sta	te the	colour	of each	layer	after	separation
---------	--------	--------	---------	-------	-------	------------

	(2)
queous layer	
yclohexane layer	
(ii) Explain why iodine is very soluble in cyclohexane but only slightly soluble in	water. (2)
(c) The cyclohexane layer is then removed from the separating funnel and dried.	
Identify, by name or formula, a suitable drying agent.	(1)
(Total for Question 19 = 8 r	narks)

BLANK PAGE

- (a) Hydrated magnesium nitrate has the formula $Mg(NO_3)_2.xH_2O$. A student devised an experiment to determine the value of \mathbf{x} by leaving 5.12 g of hydrated magnesium nitrate for several hours in a warm oven. After this time, the solid remaining had a mass of 2.97 g.
 - (i) State why the student used a warm oven to remove the water from the hydrated salt, rather than direct heating with a Bunsen burner.

	1		J				
•••••	• • • •	• • •	•••	• • • •	••••	 • • • • •	••••

(ii) Use the data obtained by the student to calculate the value of x.You must show your working.

(4)

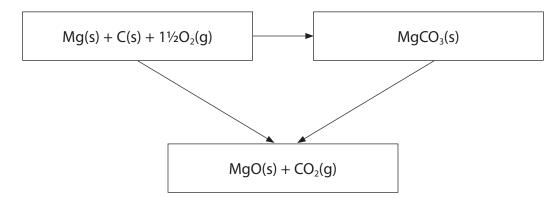

- (b) Magnesium carbonate, MgCO₃, is a white solid used as an additive in foods.
 - (i) Explain, in terms of energy changes, why magnesium carbonate is insoluble in water.

(2)

(ii) The Hess cycle and data to calculate the enthalpy change for the thermal decomposition of $MgCO_3$ are shown.

Compound	$\Delta_f H^{\oplus}$ / kJ mol ⁻¹
CO₂(g)	-394
MgO(s)	-602
MgCO₃(s)	-1096

Calculate the enthalpy change for the thermal decomposition of MgCO₃.

(2)

((iii) Explain the trend in thermal stability of Group 2 carbonates.	Mob: +974 \$5255711 5524079 E-mail reshed saba@gmail.com
	(Total for Question 20 = 13 marks	s)
	,	

21 The halogenoalkane 1-chlorobutane reacts under suitable conditions with potassium hydroxide to form the alcohol butan-1-ol.

(a) (i) Name a suitable solvent for the potassium hydroxide in this reaction.

(1)

(ii) State the type and mechanism of this reaction.

(1)

(iii) Draw the mechanism for this reaction.

Use curly arrows, and show relevant dipoles and lone pairs.

(3)

(b) A student carried out the reaction.

After separation and purification, the mass of butan-1-ol formed was 12.1 g.

The yield of the reaction was 64.0%.

Calculate the volume of 1-chlorobutane used in the reaction.

Give your answer to an appropriate number of significant figures.

[Density of 1-chlorobutane = $0.886 \,\mathrm{g \ cm^{-3}}$]

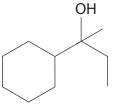

(4)

(Total for Question 21 = 9 marks)

22 An alcohol **Y** has the structure shown.

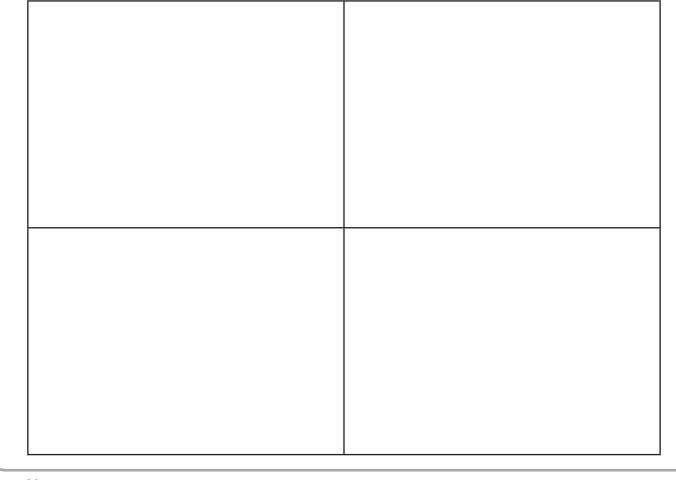

(a) Describe a **chemical** test and its positive result for the alcohol functional group in **Y**.

(2)

- (b) \mathbf{Y} reacts with concentrated phosphoric(V) acid, H_3PO_4 , to form four isomers with the molecular formula $C_{10}H_{18}$.
 - (i) Draw the skeletal formulae of the **four** isomers formed in this reaction.

(4)

(Total for Questio		
(Total for Ouastia	n 22 = 10 mar	ks)
		(2)
Draw the structure of citronellol.		(2)
c) An isomer of Y , citronellol, has the systematic name 3,7-dimethyloct-	-6-en-1-ol.	
(ii) Describe, by referring to wavenumbers and bonds, how the infrared the isomers differ from the infrared spectrum of alcohol Y .		Mob: +974 55258; E-mail:rashed.sab

SECTION C

Answer ALL the questions.

Write your answers in the spaces provided.

- 23 Propanoic acid, CH₃CH₂COOH, is a colourless liquid used as a preservative in animal feed. Propanoic acid can be formed by oxidising the alcohol propan-1-ol.
 - (a) Write the balanced equation for the oxidation of propan-1-ol to form propanoic acid. Use [O] to represent the oxygen from the oxidising agent. State symbols are not required.

(1)

*(b) Propan-1-ol is heated with a concentrated solution of acidified potassium dichromate(VI).

Explain how the conditions used affect the rate of the reaction **and** ensure that propanoic acid is the only organic product.

(6)

 	•••••	 													

(c) A student suggested using universal indicator to check for the presence of propanoic acid formed in the reaction mixture.

c: 1	al la Califia		
Give a reason why	y the result of this t	test is not likely	to be conclusive.

(1)

(d) The permitted mass of propanoic acid used in animal feed is in the range 1000–3000 mg kg⁻¹. A titration method may be used to check the concentration of propanoic acid in animal feed.

A 50.0 cm³ sample of propanoic acid solution was extracted from 50 g of an animal feed.

The sample was added to a volumetric flask and the volume made up to 250.0 cm³ and mixed thoroughly. A pipette was used to transfer 25.0 cm³ of the diluted acid into a conical flask containing an indicator.

The contents of the conical flask were titrated with a solution of sodium hydroxide, NaOH(aq), with concentration 0.00668 mol dm⁻³.

The procedure was repeated twice and the results obtained are shown.

	Run 1	Run 2	Run 3
Titre/cm³	23.20	22.10	22.20

(i) Phenolphthalein is a suitable indicator for this titration.

State the colour **change** at the end-point.

(2)

(ii) Suggest two possible reasons why the titre for Run 1 is greater than the other two titres.	Hobi-1974 d SSEPTI E-mail: mail: mai
(iii) The equation for the reaction of propanoic acid with sodium hydroxide is	
$CH_3CH_2COOH + NaOH \rightarrow CH_3CH_2COONa + H_2O$	
Calculate the mass in grams of propanoic acid extracted from the animal feed.	
Give your answer to an appropriate number of significant figures.	(5)

(iv) Use your answer to (d)(iii) to determine whether the acid in this sample lies within the permitted range for use in animal feed.

(2)

(v)	Suggest how the animal feed would be affected if the amount of propanoic acid
	was outside the permitted range.
